

## Thomson Homes

Middleton Park by Thomson Homes is an exclusive development of four and five bedroom executive homes. Building for a discerning market where attention to detail is paramount, a Thompson home has top quality fittings and equipment as standard - including electric underfloor heating in all en-suite's and bathrooms. System performance, reliability and ease of installation are just a few of the benefits that influenced Thomson Homes to change from using a cable based underfloor system to Accolade's ribbon based system. Fitted beneath all floorcoverings without the need for a screed, the Accolade system allows Thomson Homes to meet customer requests for underfloor heating throughout the home with ease.
